

# Open Public Consultation on the revision of the general pharmaceutical legislation

Fields marked with \* are mandatory.

## Introduction

---

On 25 November 2020, the Commission published a Communication on a Pharmaceutical Strategy for Europe.

The Pharmaceutical Strategy identifies flagship initiatives and other actions to ensure the delivery of tangible results. As part of the implementation of the strategy, the Commission is evaluating the general pharmaceutical legislation<sup>1</sup> and assessing the impacts of possible changes in the legislation as described in the relevant [inception impact assessment](#).

This public consultation aims to collect views of stakeholders and the general public in order to support the evaluation of the existing general pharmaceutical legislation and the impact assessment of its revision. It builds further on the public consultation<sup>2</sup> conducted for the preparation of the pharmaceutical strategy for Europe. The replies to that consultation will be taken into account for the revision of the general pharmaceutical legislation. The present questionnaire should be seen as a continuation of that process.

In parallel, the legislation for medicines for rare diseases and children is being [revised](#) as well. Separate consultation activities have been carried out for that [revision](#).

This questionnaire is available in all EU languages and you can reply in any EU language. You can pause any time and continue later. You can download your contribution once you have submitted your answers.

A summary on the outcome of the public consultation will be published by the Commission services on the [‘Have your say’ portal](#).

We thank you for your participation.

*[1] Directive 2001/83/EC of the European Parliament and of the Council of 6 November 2001 on the Community code relating to medicinal products for human use (OJ L 311, 28.11.2001, p. 67)*

*Regulation (EC) No 726/2004 of the European Parliament and of the Council of 31 March 2004 laying down Community procedures for the authorisation and supervision of medicinal products for human and veterinary use and establishing a European Medicines Agency (OJ L 136, 30.4.2004, p. 1)*

*[2] A [report](#) analysing the results of the pharmaceutical strategy consultation was published in November 2020.*

## About you

---

\* Language of my contribution

- Bulgarian
- Croatian
- Czech
- Danish
- Dutch
- English
- Estonian
- Finnish
- French
- German
- Greek
- Hungarian
- Irish
- Italian
- Latvian
- Lithuanian
- Maltese
- Polish
- Portuguese
- Romanian
- Slovak
- Slovenian
- Spanish
- Swedish

\* I am giving my contribution as

- Academic/research institution
- Business association
- Company/business organisation
- Consumer organisation
- EU citizen
- Environmental organisation
- Non-EU citizen

- Non-governmental organisation (NGO)
- Public authority
- Trade union
- Other

\* Which stakeholder group do you represent?

- Individual member of the public
- Patient or consumer organisation
- Healthcare professional
- Healthcare provider organisation (incl. hospitals, pharmacies)
- Healthcare payer
- Centralised health goods procurement body
- Health technology assessment body
- Academic researcher
- Research funder
- Learned society
- European research infrastructure
- Other scientific organisation
- Environmental organisation
- Pharmaceuticals industry
- Chemicals industry
- Pharmaceuticals traders/wholesalers
- Medical devices industry
- Public authority (e.g. national ministries of health, medicines agencies, pricing and reimbursement authorities)
- EU regulatory partner / EU institution
- Non-EU regulator / non-EU body
- Other (Please specify)

\* First name

Guy

\* Surname

Muller

\* Email (this won't be published)

gmuller@kwf.nl

\* Organisation name

*255 character(s) maximum*

European Fair Pricing Network - EFPN , on behalf of the Dutch Cancer Society

\* Organisation size

- Micro (1 to 9 employees)
- Small (10 to 49 employees)
- Medium (50 to 249 employees)
- Large (250 or more)

Transparency register number

*255 character(s) maximum*

Check if your organisation is on the [transparency register](#). It's a voluntary database for organisations seeking to influence EU decision-making.

193588825276-25

\* Country of origin

Please add your country of origin, or that of your organisation.

The Commission will publish all contributions to this public consultation. You can choose whether you would prefer to have your details published or to remain anonymous when your contribution is published. **For the purpose of transparency, the type of respondent (for example, 'business association, 'consumer association', 'EU citizen') country of origin, organisation name and size, and its transparency register number, are always published. Your e-mail address will never be published.** Opt in to select the privacy option that best suits you. Privacy options default based on the type of respondent selected

### \* Contribution publication privacy settings

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

#### **Anonymous**

Only organisation details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published as received. Your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.

#### **Public**

Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published. Your name will also be published.

I agree with the [personal data protection provisions](#)

## Looking back

---

As mentioned in the [Inception Impact assessment](#), the revision aims to tackle the following problems:

- Unmet medical needs and market failures for medicines other than medicines for rare diseases and children;
- Unequal access to available and affordable medicines for patients across the EU;
- The current legislative framework may not be fully equipped to respond quickly to innovation;
- Inefficiency and administrative burden of regulatory procedures;
- Vulnerability of supply of medicines, shortages of medicines;
- Environmental challenges and sustainability;
- Any other issues, which might emerge from the evaluation.

## Q1 In your opinion, are there any other issues that should be addressed in this revision?

800 character(s) maximum

1. Minimal level of transparency: A central focus should be transparency throughout the system as it enables accountability and scientific evaluation. This includes transparency on R&D cost, real prices, MEAs, discounts, data on generics and biosimilars, HTA studies (a pre-registry), and increased reporting on clinical trial design and outcomes.
2. Tackle gaps that hinder access: The revisions should address dominant market positions that delay access: market access strategies that disadvantage some countries, pay for delay-schemes, shelving, and withdrawals.
3. Prepare for a new generation of medicinal products and supporting technologies  
We advise to update Regulation (EC) No 1394/2007 in order to respond to innovations in genome-editing technologies

## Q2 How has the legislation performed in terms of the following elements?

	Very well	Well	Moderately	Poorly	Very poorly	Don't know
1. Fulfilling its public health protection mission for patients and society.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Promoting the development of new medicines, especially for unmet medical needs.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Enabling timely development of medicines at all times, including during crises.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Enabling timely authorisation, including scientific evaluation, of medicines in normal times.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Enabling timely authorisation, including scientific evaluation during crises.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Adapting efficiently and effectively to technological and scientific advancements and innovation.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

7. Ensuring medicines are of high quality, safe and effective.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
8. Addressing the competitive functioning of the market to support affordability.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
9. Ensuring the availability of generic <sup>3</sup> and biosimilar <sup>4</sup> medicines.  <i>[3] "Generic" is a copy of a medicine based on simple or chemical molecules.</i> <i>[4] "Biosimilar" is a copy of a medicine based on biological molecules.</i>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
10. Ensuring that new medicines are timely available to patients in all EU countries.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
11. Ensuring that medicines stay on the market at all times and that there are no shortages.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
12. Ensuring that authorised medicines are manufactured, used and disposed of in an environmentally friendly manner.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
13. Ensuring that the EU system for development, authorisation and monitoring of medicines, including its rules and procedures, is understandable and easy to navigate.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
14. Attracting global investment for medicine innovation in the EU.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, including positive or unintended effects of the legislation, or would you like to justify your replies?

*800 character(s) maximum*

Q8 EFPN advises to improve the competitive position of non-commercial entities (research institutes/ academia) who are important in tackling UMN through research and product development. Easily accessible and free guidance and technical assistance should be available to them. Furthermore, increase competitiveness; reduce possibilities for evergreening. Q11 A workable and predictable instrument to tackle non-availability should be in place. Attention should be given to withdrawals (Aspen) and marketing strategies that reduce patient access (Bluebird). Q3 Greater degrees of harmonization and coordination among authorities are needed, also in the pre-EMA phase. Q4/5/10 All incentives need to be transparent and increase actual access. Q14 Adoptive pathway approaches need to ensure robust evidence

## Looking forward

---

This section reflects on possible solutions to address the problems identified in the inception impact assessment mentioned in the previous section.

Your contribution will help us in defining the way forward.

### UNMET MEDICAL NEEDS

One of the aims of the strategy is to stimulate innovation and breakthrough therapies, especially in areas of ‘unmet medical need’.

Regulators, health technology assessment experts and representatives of bodies responsible for reimbursing or paying for medicines (‘payers’) are discussing a definition or a set of principles for ‘unmet medical needs’<sup>5</sup> in order to achieve the objectives of the general pharmaceutical legislation. The discussions reveal different perceptions of what is an ‘unmet medical need’. Convergence on this key concept should facilitate the design of clinical trials, generation of evidence and its assessment, and the quick availability on the market of these products and ensuring that innovation matches the needs of patients and of the national health systems.

The purpose of this question is to identify elements that are important in defining what is unmet medical need and in which areas of unmet medical need innovation should be stimulated.

*[5] Please note that a similar discussion is taking place in the context of medicines for rare diseases and for children. The concept of ‘unmet needs’ in the context of rare diseases and children might be slightly differentiated compared to ‘unmet needs’ in the context of the general pharmaceutical legislation.*

### Q3 How important are the following elements for defining ‘unmet medical needs’?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Seriousness of a disease.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Absence of satisfactory treatment authorised in the EU.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. A new medicine has major therapeutic advantage over existing treatment(s).	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Lack of access for patients across the EU to an authorised treatment.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Other (please specify).	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined elements, or would you like to justify your replies?

*800 character(s) maximum*

The criteria of what constitutes an 'unmet medical need' should be set in a transparent and objective manner. We strongly suggest to come to a definition in a participatory way, involving patients, as well as research institutes and other patient/disease organisations. From the outset it should be clear whether a medicine benefits patients with an 'unmet medical need'.

The EFPN would appreciate if the following elements would have a central role in defining an unmet need :

1. Low levels of current commercial R&D (measured in number of projects registered as clinical trial for a therapeutic area)
2. Incidence in the EU
3. Survival rate in the EU
4. Mortality in the EU
5. Severity
6. The availability of alternative treatment
7. Urgency and Socio-economic impact on general public

## **INCENTIVES FOR INNOVATION**

The general pharmaceutical legislation guarantees the pharmaceutical innovator, typically a company, regulatory data and market protection for its new medicinal product. This data protection makes sure that another pharmaceutical company cannot re-use the proprietary data of the innovator for 8 years. Market protection makes sure that a generic or biosimilar medicine cannot be marketed until 10 years after authorisation. This dual protection shields a pharmaceutical innovator from generics or biosimilars on the market for 10 years. This protection is part of the EU system of incentives for innovation. The EU regime of [intellectual property protection](#) provides an additional protection coverage but is beyond the scope of this questionnaire and the revision of the general pharmaceutical legislation.

#### Q4 What do you think of the following measures to support innovation, including for ‘unmet medical needs’?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. The current data and market protection periods for innovative medicines: 10 years of market protection, and 8 years of data protection.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Provide different data and market protection periods depending on the purpose of the medicine (i.e. longer period of protection in areas of unmet medical need).	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Reduce the data and market protection periods to allow earlier access for generic and biosimilar medicines to the market.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Introduce new types of incentives <sup>6</sup> on top of the existing data and market protection for medicines addressing an ‘unmet medical need’.						
<i>[6] Examples of new incentives are a transferable exclusivity voucher or a priority review voucher. A transferable exclusivity voucher would give the legal right to extend the protection time period of any other patented medicinal product, in exchange for the successful regulatory approval of a specified medicine for unmet medical need (e.g. an antibiotic). The voucher would be transferable or saleable, and may impact the turnover and profitability levels of other products in a developer's portfolio. A priority review voucher gives priority to the assessment of the application of the medicine in question or another medicine in the applicant's portfolio.</i>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
5. Early scientific support and faster review/authorisation of a new promising medicine for an unmet medical need.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Public listing of priority therapeutic areas of high unmet medical need to support product development by providing incentives.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Require transparent reporting from companies about their research and development costs and public funding as a condition to obtain certain incentives.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
8. Other (please specify)	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

*800 character(s) maximum*

Various protection forms are needed for different levels of beneficial value of new medicines and for different levels of certainty of the evidence on the clinical value. For example, those targeting a high unmet medical need, where no alternative exists and score high (e.g. on the ESMO-MCBS) should be rewarded. Those who score low should not/limited be rewarded. Important: no need for more but better incentives. The EFPIA welcomes the suggestions above, not on top of existing incentives, but rather as a replacement/redrafted version. Don't overcomplicate and find ways to decelerate me-too's and evergreening. Measures to reduce market concentration in the pharmaceutical sector are needed and promotion of social responsible licensing for medicines with public/not for profit funding welcomed

## **ANTIMICROBIAL RESISTANCE<sup>7</sup>**

Antimicrobial resistance (AMR) is the ability of microorganisms (such as bacteria, viruses, fungi or parasites) to survive and grow over time and no longer respond to medicines making infections harder to treat and increasing the risk of infections, severe illness and death. Antimicrobials include antibiotics, which are substances that fight bacterial infections. Overprescribing, overuse and inappropriate use of antibiotics are key drivers of AMR, leading to harmful health outcomes. The question below is intended to collect opinions on both the incentives for the development of new antimicrobials as well as possible options on their prudent use.

*[7] [amr\\_2017\\_action-plan.pdf \(europa.eu\)](#).*

**Q5 Should there be specific regulatory incentives for the development of new antimicrobials while taking into account the need for more prudent use and if so what should they be?**

*1000 character(s) maximum*

don't know

## **FUTURE PROOFING: ADAPTED, AGILE AND PREDICTABLE REGULATORY FRAMEWORK FOR NOVEL PRODUCTS**

Novel products and innovative solutions continue to challenge the understanding of a "medicinal product" with low volume, and cutting-edge products (e.g. medicines combined with self-learning artificial intelligence) becoming a new reality. 'Bedside' manufacture of more individualised medicines changes the way medicines are produced. There are classification and interplay challenges with other medical products, such as medical devices and substances of human origin, or related to the combination of clinical trials with in vitro diagnostics/medical devices and medicines. In addition, certain cell-based advanced therapy medicines<sup>8</sup> are offered in hospital settings and are exempted from aspects of the pharmaceutical legislation. These developments offer possibilities for novel promising treatments and new ways of authorising and monitoring medicines but they are also testing the limits of the current regulatory system.

They need to be addressed to unfold their potential while safeguarding the principles of high quality, safety and efficacy of medicines.

Digital transformation is affecting the discovery, development, manufacture, evidence generation, assessment, supply and use of medicines. Medicines, medical technologies and digital health are becoming increasingly integral to overarching therapeutic options. These include systems based on artificial intelligence for prevention, diagnosis, better treatment, therapeutic monitoring and data for personalised medicines and other healthcare applications.

*[8] Advanced therapy medicinal products (ATMPs) are medicines for human use that are based on genes, tissues or cells. They offer ground-breaking new opportunities for the treatment of disease and injury.*

**Q6 How would you assess the following measures to create an adapted, agile and predictable regulatory framework for novel products?**

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
2. Create a central mechanism in close coordination with other concerned authorities (e.g. those responsible for medical devices, substances of human origins) to provide non-binding scientific advice on whether a treatment/product should be classified as a medicine or not.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Make use of the possibility for 'regulatory sandboxes' <sup>9</sup> in legislation to pilot certain categories of novel products/technologies.  <i>[9] Some very innovative solutions fail to see the light of day because of regulations which might be outdated or poorly adapted for fast evolving technologies. One way to address this is through regulatory sandboxes. This enables innovative solutions not already foreseen in regulations or guidelines to be live-tested with supervisors and regulators, provided that the appropriate conditions are in place, for example to ensure equal treatment. Regulatory sandboxes provide up-to-date information to regulators and supervisors on, and experience with, new technology, while enabling policy experimentation. See COM(2020) 103 final.</i>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Create adaptive regulatory frameworks (e.g. adapted requirements for authorisation and monitoring with possibility to adjust easily to scientific progress) for certain novel types of medicines or low volume products (hospital preparations) in coherence with other legal frameworks (e.g. medical devices and substances of human origin <sup>10</sup> ) and respecting the principles of quality, safety and efficacy.  <i>[10] Substances that are donated by humans such as blood, plasma, cells, gametes, tissues and organs and are applied as therapy. Some substances of human origin can also become starting materials to manufacture medicines.</i>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

5. Introduce an EU-wide centrally coordinated process for early dialogue and more coordination among clinical trial, marketing authorisation, health technology assessment bodies, pricing and reimbursement authorities and payers for integrated medicines development and post-authorisation monitoring.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Other (please specify)	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

*800 character(s) maximum*

In order to create an adaptable regulatory framework there should be:

1. A focus on regulatory harmonization between Member States on the requirements for both translational and clinical research
2. Harmonize HTA in the EU. Introduce a pre-registry system for HTA studies, so all evidence will be transparent and publicly available. Strong and early collaboration with HTA in order to facilitate a faster route to daily clinical practice or early decision not to allow to the market.
3. Make post market surveillance to track real world evidence on clinical effectiveness more transparent towards national health authorities and EMA. Strongly involve patients in this process.

**Q7. Do you think that certain definitions and the scope of the legislation need to be updated to reflect scientific and technological developments in the sector (e.g. personalised medicines, bedside manufacturing, artificial intelligence) and if so what would you propose to change?**

*1000 character(s) maximum*

Technological developments are much appreciated.  
There is a need to go beyond flexibility and/or harmonization of GMO regulations and the mitigation of environmental risks. Genome editing technologies enable to move medicinal product development towards a model of personalized medicine. For example, T cell therapy products may be genetically edited for one individual or a small subgroup of patients. The current pharmaceutical framework has no regulatory space to bring such products to the market. There should be a clear and distinct approach when it comes to personalized medicines. Moreover, the definition of certain medicinal products, such as gene therapy medicinal products, are outdated with respect to the arrival of new technologies for gene editing. Therefore, an evaluation of Regulation (EC) No 1394/2007 is warranted to be included in the current revision of the general pharmaceutical legislation, or to be initiated in the near future, in order to respond quickly to innovation.

## **REWARDS AND OBLIGATIONS RELATED TO IMPROVED ACCESS TO MEDICINES**

Some medicines and therapies do not always reach patients in all EU countries, so patients in the EU still have different levels of access to medicines, depending on where they live. Even if a medicine received an EU-wide authorisation, companies are currently not obliged to market it in all EU countries. A company may decide not to market its medicines in, or decide to withdraw them from, one or more countries. This can be due to various factors, such as national pricing and reimbursement policies, size of the population and level of wealth, the organisation of health systems and national administrative procedures. Smaller markets in particular face challenges for availability and supplies of medicines.

**Q8 How would you assess the following measures to improve patient access to medicines across the EU?**

--	--	--	--	--	--	--	--

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules which provide no obligation to market medicines in all EU countries.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
2. Require companies to notify their market launch intentions to regulators at the time of the authorisation of the medicine.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Introduce incentives for swift market launch across the EU.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
4. Allow early introduction of generics in case of delayed market launch of medicines across the EU, while respecting intellectual property rights.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Require companies to place – within a certain period after authorisation – a medicine on the market of the majority of Member States, that includes small markets.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Require companies withdrawing a medicine from the market to offer another company to take over the medicine.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Introduce rules on electronic product information to replace the paper package leaflet.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
8. Introduce harmonised rules for multi-country packages of medicines.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
9. Other (please specify).	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

The EFPN strongly agrees with the ideas set forth in the IIA

1. incentives should stimulate medicine development in the areas of unmet needs,
2. connect rewards to patient access and obligation to market,
3. and, more transparency including pricing of medicines.

However, the EFPN is hesitant when it comes to creating new rewards. We favor an approach whereby the EC assess and reshapes current incentives and uses pilots to evaluate/test them. Moreover, measures to increase affordability of expensive medicines should be considered to achieve timely access across all Member States.

### ENHANCE THE COMPETITIVE FUNCTIONING OF THE MARKET TO ENSURE AFFORDABLE MEDICINES

The affordability of medicines has implications for both public and household finances. It poses a growing challenge to pay for medicines in the majority of Member States. Often, innovative medicines have higher prices, while there are growing concerns among stakeholders about the real-life effectiveness of some medicines and related overall costs. This puts the budgetary sustainability of health systems at risk, and reduces the possibilities for patients to have access to these medicines. Generics and biosimilars<sup>11</sup> of medicines which no longer benefit from intellectual property protection (off-patent medicines) may provide accessible and affordable treatments. They also increase the availability of alternative treatment options for patients. They may also increase competition between available medicines. However, experience shows that there are still barriers for medicines entering the EU market, including for generics or biosimilars.

[11] "Generics" are copies of medicines based on simple or chemical molecules; "biosimilars" are copies of medicines based on biological molecules.

### Q9 In your view, to what extent would the following measures support access to affordable medicines?

	To a great extent	To a certain extent	No change	Very little	Not at all	Don't know
1. Maintain the current rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
2. Stimulate earlier market entry through a broader possibility to authorise generics /biosimilars despite ongoing patent protection ('Bolar exemption') <sup>12</sup> .	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
[12] The Bolar exemption allows companies to conduct research on patent protected medicines under the condition that it is with a view to apply for a marketing authorisation for a generic.						

3. Create a specific (regulatory) incentive for a limited number of biosimilars that come to the market first.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Introduce an EU-wide scientific recommendation on interchangeability for specific biosimilars.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Introduce other, non-legislative measures, such as joint procurement to reinforce competition while addressing security of supply and environmental challenges.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Other (please specify).	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

*800 character(s) maximum*

Cross country collaborations in all its forms are crucial for creating predictability and market access for Industry while maintaining access and affordability. Assisting member states with joint procurement process, stimulating cooperation and sharing best practices is key. Specifically when it comes to transparent collaborative price negotiations.

In markets where unmet needs are not met, or where withdrawals happen, proactively incentivize not-for profit organization (like research institutes/academia) to further develop and provide access to medicines. The EFPN strongly argues that the underlying factor that hinders access to affordable medicines is the lack of transparency. This legislation should do more to embed and enable transparency throughout the entire pharmaceutical system.

## REPURPOSING OF MEDICINES

Repurposing is the process of identifying a new use for an established medicine in a disease or condition other than that it is currently authorised for. Repurposing of older (off-patent) medicines constitutes an emerging and dynamic field of medicines development, often led by academic units and medical research charities, with the potential for faster development times and reduced costs as well as lower risks for companies. This is because repurposing commonly starts with substances that have already been tested and many have demonstrated an acceptable level of safety and tolerability. The objective is to identify the opportunities and address any regulatory burdens to facilitate repurposing of off-patent, affordable medicines.

**Q10 What measures could stimulate the repurposing of off-patent medicines and provide additional uses of the medicine against new diseases and medical conditions? Please justify your answers.**

*1000 character(s) maximum*

The potential of bringing pharmaceuticals with a known positive benefit-risk profile to other indications is enormous. This could be stimulated by supporting academic groups to look for additional indication for new use cases, and by encouraging public private partnerships for indications with unmet need. This can be done

for example by facilitating (expedited) pathways to add indications close to or after patent loss.

Furthermore, this exercise should look into alternative formulations of existing pharmaceuticals. E.g. the oral formulation of topotecan has fewer registered indications than the IV formulation. This might add value for patients as well as economically attractive pharmaceuticals entering the market.

The EFPN also sees potential in a short and limited protection for repurposed medicines through innovative incentives, like delinked rewards, minimum price commitments, additional market protection

## **SECURITY OF SUPPLY OF MEDICINES**

Shortages of medicines and the vulnerabilities in the pharmaceutical supply chain continue to be concerns in the EU. Shortages of medicines can have serious impacts on patient care. Under the current pharmaceutical legislation, pharmaceutical companies and wholesalers must, within the limits of their responsibilities, ensure a continued supply of medicines once they are placed on the market in the EU. Companies must also notify national authorities at least two months before an expected shortage or planned market withdrawal.

**Q11 What is your view on the following measures to ensure security of supply of medicines in the EU?**

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
2. Earlier reporting of shortages and market withdrawals to national authorities in a common format.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Companies to have shortage prevention plans.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Companies to have safety stocks.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Monitoring of supply and demand at national level.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Introduce a shortage monitoring system at EU level.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Require companies to diversify their supply chains, in particular the number of key suppliers of medicines and components.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
8. Companies to provide more information to regulators on their supply chain.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
9. Introduce penalties for non-compliance by companies with proposed new obligations.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
10. EU coordination to help identify areas where consolidation in the supply chain has reduced the number of suppliers.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
11. Other (please specify)	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

Regarding point 5: This is an important factor and could be strengthened when supported in identifying critical medicines (like AMGROS does) that should be monitored especially.  
 Regarding point 8: EU help to make supply chains and bottlenecks more transparent. Stimulate companies to provide specific causes for shortages and make these factors transparent and public.  
 Where possible increase EU production

## QUALITY AND MANUFACTURING

Medicines manufactured for the EU market must comply with the principles and guidelines of good manufacturing practice (GMP). GMP describes the minimum standard that a medicines manufacturer must meet in their production processes. GMP requires that medicines are of consistent high quality, are appropriate for their intended use and meet the requirements of the marketing authorisation or clinical trial authorisation.

### Q12 What is your opinion of the following measures to ensure manufacturing and distribution of high quality products?

	Very adequate	Adequate	Neutral	Less adequate	Not adequate	Don't know
1. Maintain the current rules.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Strengthen manufacturing and oversight rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
3. Adapt manufacturing rules to reflect new manufacturing methods.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Include selected environmental requirements for manufacturing of medicines in line with the one health approach on antimicrobial resistance <sup>13</sup> .  <i>[13] The one-health approach is a holistic and multi-sectorial approach to addressing antimicrobial resistance since antimicrobials used to treat infectious diseases in animals may be the same or be similar to those used in humans.</i>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

5. Increase Member State cooperation and surveillance of the supply chain in the EU and third countries.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Strengthen and clarify responsibilities of business operators over the entire supply chain on sharing information on quality, safety and efficacy.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Other (please specify).	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

*800 character(s) maximum*

There is little space for new manufacturing methods under current (stringent) GMP regulations that are applicable from phase I trials onwards. An incremental increase of GMP compliance along the clinical development trajectory should be considered.

## ENVIRONMENTAL CHALLENGES

While access to pharmaceuticals is a priority, it is also important that the environmental impacts of those pharmaceuticals are as low as possible. The environmental risk assessments (ERAs) is currently not taken into account in the overall benefit/risk analysis which influences the delivery of a marketing authorisation (MA) of a medicine. ERA can influence risk management measures. Yet, ERA results are not decisive in the MA process.

**Q13 How would you assess the following measures to ensure that the environmental challenges emerging from human medicines are addressed?**

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	<input type="radio"/>	<input checked="" type="radio"/>				
2. Strengthen the environmental risk assessment during authorisation of a medicine, including risk mitigation measures, where appropriate.	<input type="radio"/>	<input checked="" type="radio"/>				
3. Harmonize environmental risk assessment by national regulators, including risk mitigation measures.	<input type="radio"/>	<input checked="" type="radio"/>				
4. Increase information to the health care professionals and the general public about the assessment of environmental risks of medicines.	<input type="radio"/>	<input checked="" type="radio"/>				
5. Allow companies to use existing data about environmental risks for authorisations of a new medicine to avoid duplicating tests.	<input type="radio"/>	<input checked="" type="radio"/>				
6. Other (please specify).	<input type="radio"/>	<input checked="" type="radio"/>				

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

*800 character(s) maximum*

don't know

**Q14 Is there anything else you would like to add that has not been covered in this consultation?**

*900 character(s) maximum*

Secret and opaque trade negotiations combined with profit maximizing marketing strategies lead to an unsustainable health care system. This 'old way' of working is unsustainable. Europe is aging, the cancer burden is rising from to 2.7 million new cases and 1.3 million deaths in 2020, to 3,4 million cases, that is an + 21.4% increase in cancer cases in 20 years' time. The budget impact of innovative medicines are higher. And more expensive medicines are marketed, with an even higher price (Zolgensma 1,9 million). We trust the Commission acknowledges the urgency for more transparency, affordability and real access to treatments for all patients.

**Q15 In case you would like to share a document that substantiates your replies, please upload it below (optional).**

Only files of the type pdf,txt,doc,docx,odt,rtf are allowed
